BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates generally to underwater habitats and, more specifically, to a plurality of interconnected synthetic islands having an independent infrastructure utilizing natural resources in order to operate in an environmentally friendly manner. The present invention houses a marine based theme park in which people interact with the environment for fun and pleasure while learning about and developing respect for the beauty and fragile balance of the ecosystem.

2. Description of the Prior Art

There are other aquatic structures designed for human habitation. Typical of these is U.S. Pat. No. 739,961 issued on Sep. 29, 1903 to B. H. Weisker on Sep. 29, 1903.

Another patent was issued to S. Yoneda et al. on Aug. 1, 1972 as U.S. Pat. No. 3,680,515. Yet another U.S. Pat. No. 1,313,838 was issued to E. D. Stodder on Aug. 19, 1919 and still yet another was issued on Feb. 12, 1974 to J. B. Sjoberg as U.S. Pat. No. 3,791,080.

Another patent was issued to S. Akazaki et al. on Jul. 22, 1975 as U.S. Pat. No. 3,895,495. Yet another U.S. Pat. No. 4,047,390 was issued to W. D. Boyce on Sep. 13, 1977. Another was issued to Morris S. Kahn on Feb. 5, 1980 as U.S. Pat. No. 4,186,532 and still yet another was issued on Apr. 1, 1980 to W. Libitzsch et al. as U.S. Pat. No. 4,195,658.

Another patent was issued to V. P. Thompson on Nov. 10, 1981 as U.S. Pat. No. 4,299,066. Yet another U.S. Pat. No. 4,565,149 was issued to Clasky et al. on Jan. 21, 1986. Another was issued to M. Niimura on Sep. 17, 1991 as U.S. Pat. No. 5,049,004 and still yet another was issued on Dec. 4, 2001 to Aristizabal as U.S. Pat. No. 6,325,012.

U.S. Pat. No. 739,961

Inventor: B. H. Weisker

Issued: Sep. 29, 1903

A submarine building composed of water-tight submerged stories below the surface of the water, a number of stories above the surface of the water, and an intermediate or mezzanine story having openings for the entrance of the water, separating the lower submerged stories from the upper stories, substantially as set forth.

U.S. Pat. No. 1,313,838

Inventor: Edward D. Stoddard

Issued: Aug. 19, 1919

A submarine observatory comprising a caisson, a stairway in said caisson, observation windows below the water level, means for illuminating the water in the field of view from said windows, and an electrically operated pump, and a float for automatically actuating said pump.

2

U.S. Pat. No. 3,680,515

Inventor: Shoji Yoneda et al.

Issued: Aug. 1, 1972

An undersea observation gallery comprising an annular chamber having sight windows in the outer peripheral wall thereof and an independent combination ballast tank and pontoon connected to the top of said annular chamber and communicated with said annular chamber by a stairway, said annular chamber being submerged or surfaced when water is charged into or discharged from said combination ballast tank and pontoon.

U.S. Pat. No. 3,791,080

Inventor: John B. Sjoberg

Issued: Feb. 12, 1974

A floating or land based modular assembly for housing or commercial use including one or more selectively interengageable units. Each unit is of polygonal prefabricated shape and comprises complementary base or hull sections and a roof section which sections are spaced apart by supporting columns, the supporting columns being removed to permit collapsing of the unit. Means are provided for joining any desired number of modular units together, and for retaining the assembly in place on water or land.

U.S. Pat. No. 3,895,495

Inventor: Shigeru Akazaki et al.

Issued: Jul. 22, 1975

An observation vessel incapable of self-propulsion and anchored in the sea for observing underwater and seabottom ecology in a relaxed sightseeing atmosphere in an observation chamber of an undersea observation tower. The latter is mounted for vertical movement below the sea-level at the central portion of the vessel.

U.S. Pat. No. 4,047,390

Inventor: William D. Boyce, II

Issued: Sep. 13, 1977

Apparatus for isolating from a body of water a predetermined bottom area and a volume of water or other liquid extending above the bottom area up to the surface of the body of water, comprising a flexible wall member with a flexible and conforming base section formed on its lowermost edge. The base section is adapted to be filled selectively from the surface of the body of water to anchor the wall member to the bottom. A float member is secured to the uppermost section of the wall member to keep the wall member floating above the surface of the body of water.

U.S. Pat. No. 4,186,532

Inventor: Morris S. Kahn

Issued: Feb. 5, 1980

An off-shore underwater observatory comprising a lower, submerged observation gallery fitted with at least one obser-

vation window and having a ceiling with an opening through which the observation gallery is accessible, and a body of water on top of the gallery such that the combined weight of the structure and the water exceeds the buoyancy. An annular skirt may depend from the ceiling in extension of said opening to a level which is below the head level of a person standing in the gallery, the upper edge(s) of the window(s) not exceeding the lower edge of said skirt.

U.S. Pat. No. 4,195,628

Inventor: Wolfgang Lubitzsch et al.

Issued: Apr. 1, 1980

A deep sea diving circulation system for a diver at a diving depth from a station above the water level, comprises a closed respiratory gas delivery line from the station to the diver and a return line from the diver to the station. A CO.sub.2 absorber is arranged in the delivery line above the water level along with means for sensing the value of the oxygen in the delivery line and for supplying a correct oxygen replacement. The respiratory gas is circulated by a compressor which is capable of producing the necessary pressure difference for the level of operation of the diver in respect to the surface. A bypass line is arranged to connect across the inlet and outlet to the compressor and the flow cross-section therethrough is controlled by the pressure in the line circulating system. Cylinders with pressurized breathing gas are connected into the circulating line system before the diver's helmet through a pressure reducer having an after pressure lower than the pressure in the line system before the diver's helmet. The carbon dioxide control device is arranged in a bypass line in the system located above the water surface and so is an oxygen control device. A pressure reducer is arranged in the circulating line system and it is actuated by the diving depth pressure.

U.S. Pat. No. 4,299,066

Inventor: Virley P. Thompson

Issued: Nov. 10, 1981

A dome structure having a plurality of isolatable and preferably environmentally isolatable and inhabitable compartments. These inhabitable compartments are preferably capable of generating an environmental condition capable of supporting animal life and preferably human life. The dome structure comprises a first upper dome section and a first lower dome section which form a first environmentally isolated dome chamber therebetween. The apparatus includes a second upper dome section having a peripheral size smaller than the first upper dome section. A second lower dome section has a peripheral size smaller than the first lower dome section and is capable of being attached to the second upper dome section to form a second environmentally isolated dome chamber. This second isolated dome chamber is surrounded by and environmentally isolated from the aforesaid peripheral portions of the first and second upper dome sections and peripheral portions of the first and second lower dome sections to thereby ensure the isolation in the first and second dome chambers. In a particular preferred embodiment, each of the first and second dome chambers are of a size to be occupied by human beings. The structure includes means to generate its own source of power such as electrical power.

U.S. Pat. No. 4,565,149

Inventor: Richard Clasky et al.

Issued: Jan. 21, 1986

A semi-submergible spherical residential structure adapted to be floated in a body of water. The structure features a substantially spherical shell having a hollow annular sponson affixed around its maximum girth such that the sponson is parallel to the water surface when the structure is floating in a body of water. The outer diameter of the sponson is sufficiently large so as to stabilize the shell when floating and the sponson has a width which is sufficiently great so as to provide adequate reserve buoyancy to the structure when the latter is weighted.

U.S. Pat. No. 4,049,004

Inventor: Masateru Niimura

Issued: Issued Sep. 17, 1991

An underwater building comprises a floating base that is to be fixed to a bottom under water or the sea and a building body is constructed on the base. The base floats on the water surface before construction of the body of the building, and the building body formed thereon has a double-walled construction having an opening between an outside wall and an inside wall. Water is selectively poured into and drained from the opening, and by its weight the building body is controllably sunk into the water. Only a gateway tower portion made in the upper portion of the building body is eventually left projecting out of the water.

U.S. Pat. No. 6,325,012

Inventor: Luis Alberto Aristizabal

Issued: Dec. 4, 2001

A complete design for a submergible cabin is submitted, which provides commodities and standards required for housing 8 people with absolute commodity and safety under the water for an indefinite period of time. The infrastructure for life support is located at the coast and the supplies are driven through pipelines anchored to the sea bottom. The level of water in the lower access, which works under the upside down cup principle, is controlled by redundant level sensors, which in turn allow access of fresh air to the cabin, sending to the coast part of the used air in order to not recycle the same air and evacuate bad smell, CO.sub.2 and heat from air conditioner and refrigerator units. The design of the shells and the structure allows its transportation in standard containers and then assembly at the dock, close to the installation place. The total construction from ceiling to floor is carried out with only 3 small forms due to the design is done with repeating pieces in order to reduce costs. While these aquatic habitats may be suitable for the purposes for which they were designed, they would not be as suitable for the purposes of the present invention, as hereinafter described.

SUMMARY OF THE PRESENT INVENTION

A primary object of the present invention is to provide an environmentally friendly nature-based theme park on a plurality of synthetic islands.

5

Another object of the present invention is to provide a man-made island resort complex that has a plethora of activities and exhibits that are both surface based and underwater.

Yet another object of the present invention is to provide a man-made island resort complex having a plethora of activities and exhibits that are educational and fun.

Still yet another object of the present invention is to provide a man-made island resort complex that is operated entirely using natural resources.

Another object of the present invention is to provide a man-made island resort complex that may be transported to other locations.

Yet another object of the present invention is to provide a man-made island resort complex that is handicap and pet friendly.

Another object of the present invention is to provide a man-made island resort complex that is simple and easy to use.

Still yet another object of the present invention is to provide a man-made island resort complex that is inexpensive to manufacture and operate.

Additional objects of the present invention will appear as the description proceeds.

The foregoing and other objects and advantages will appear from the description to follow. In the description reference is made to the accompanying drawing, which forms a part hereof, and in which is shown by way of illustration specific embodiments in which the invention may be practiced. These embodiments will be described in sufficient detail to enable those skilled in the art to practice the invention, and it is to be understood that other embodiments may be utilized and that structural changes may be made without departing from the scope of the invention. In the accompanying drawing, like reference characters designate the same or similar parts throughout the several views.

The following detailed description is, therefore, not to be taken in a limiting sense, and the scope of the present invention is best defined by the appended claims.

BRIEF DESCRIPTION OF THE DRAWING FIGURES

In order that the invention may be more fully understood, it will now be described, by way of example, with reference to the accompanying drawing in which:

FIG. 1 is an illustrative view of the present invention;

FIG. 2 is a top view of the present invention;

FIG. 3 is a location and definition of the present invention;

FIG. 4 is a side view of the present invention;

FIG. 5 is an illustrative view of the airport island of the present invention;

FIG. 6 is an illustrative view of the desalinization plant of the present invention;

FIG. 7 is an illustrative view of the chemical waste and disposal plant of the present invention;

FIG. 8 is an illustrative view of the monorail system of the present invention;

FIG. 9 is an illustrative view of the turbo generator power facility of the present invention;

FIG. 10 is an illustrative view of the underwater rooms of the present invention;

FIG. 11 is an illustrative view of the above and underwater restaurants of the present invention;

FIG. 12 is an illustrative view of the golf course island of the present invention.

6

FIG. 13 is an illustrative view of the waterfalls and stream of the present invention;

FIG. 14 is an illustrative view of the pool and stream of the present invention;

FIG. 15 is a top view of the boat slip station of the present invention;

FIG. 16 is a top view of the aquarium island of the present invention;

FIG. 17 is a top view of the floating nightclub of the present invention;

FIG. 18 is a view of the dolphin shaped guest quarters of the present invention;

FIG. 19 is a top view of the planetarium of the present invention;

FIG. 20 is a top view of the island bungalows of the present invention;

FIG. 21 is a view of the above water bungalows of the present invention;

FIG. 22 is a chart of other activities of the present invention;

FIG. 23 is an illustrative view of the whale open ocean habitat of the present invention;

FIG. 24 is an illustrative view of the shark open ocean habitat of the present invention;

FIG. 25 is an illustrative view of the compressed air cannon of the present invention;

FIG. 26 is an illustrative view of the activity mountain of the present invention;

FIG. 27 is an illustrated view of the church of the present invention;

FIG. 28 is an illustrative view of the underwater restaurant of the present invention;

FIG. 29 is an illustrative view of a telephone of the present invention;

FIG. 30 is an illustrative view of a tri-level unit of the present invention;

FIG. 31 is an illustrative view of the rain forest enclosure of the present invention;

FIG. 32 is an illustrative view of the wolf habitat enclosure of the present invention; and

FIG. 33 is a chart of other provided services, facilities and protocol.

DESCRIPTION OF THE REFERENCED NUMERALS

Turning now descriptively to the drawings, in which similar reference characters denote similar elements throughout the several views, the figures illustrate man-made island resort complex with entertainment, educational and lodging facilities of the present invention. With regard to the reference numerals used, the following numbering is used throughout the various drawing figures.

10 man-made island resort complex

12 buoyant base support structure

14 anchoring means

16 facilities

18 transportation means

20 aero-gel material

22 main island

24 satellite island

26 retractable anchor pedestals

28 guest lodging facilities

30 dolphin-shaped hotel

32 lobby of 13

34 guest room of 30

36 penthouse of 30

7

38 water tube of 30
 40 sub and water pump of 30
 42 retractable ceiling of 36
 44 exterior blue light of 30
 46 elevator of 30
 48 entrance to 32
 43 spiral ramp
 50 cave-shaped bungalow
 52 dome structure of 50
 54 interior waterfall and basin of 50
 56 hot and cold water temperature control switches
 58 salt/fresh water changing means
 60 toilet area with hot water
 62 boardwalk
 64 underwater guest rooms
 66 exterior bulletproof glass
 68 room access port
 70 enclosed escalator tube
 72 fresh air and ventilation port
 74 emergency oxygen tanks
 76 door to room
 78 door to tube
 80 surface-based lobby
 82 tri-level guest unit
 84 bulletproof sphere
 86 first floor living area
 88 second floor children's room
 90 third floor swimming pool
 92 master bedroom
 94 water slide
 96 waterfall
 98 water feed cylinder
 100 light source for 98
 102 luminescent control switch
 104 wet bar of 82
 106 children's bar of 88
 108 hydraulic retractable ceiling
 110 airport
 112 runway
 114 air traffic control tower of 110
 116 airport security, fire and rescue headquarters
 118 flight office of 112
 120 emergency medical services facility of 110
 122 emergency vehicle hangar of 110
 124 marina of 110
 126 nautical plans facility of 110
 128 visitor comfort station of 110
 130 flight office of 110
 132 helipad
 134 landing lights
 136 marina island
 138 support and service facility of 136
 140 small boat portage of 136
 142 large boat slip of 136
 144 ocean liner slip of 136
 146 monorail system
 148 sub-surface transport tube of 146
 150 concrete stanchions of 146
 152 monorail track of 148
 154 passenger transport center of 146
 156 monorail train of 146
 158 passenger compartment of 156
 160 drivers compartment of 156
 162 bulletproof window of 156
 164 turbo-generated power facility
 168 turbo-generator of 164
 170 water outtake line of 164

8

172 power distribution line of 164
 174 chemical waste and disposal plant
 176 power source from turbo-generated power plant
 177 waste inlet from facilities
 5 178 treated waste outlet to disposal tank
 180 desalinization plant
 182 purification system of 180
 184 seawater intake conduit of 180
 186 outtake conduit of 180
 10 188 fresh water distribution means of 180
 189 flow switch of 188
 190 18-hole golf course
 192 arched access footbridge of 190
 194 dolphin waterfall of 192
 15 196 golf ball and tee shaped structure of 190
 198 ocean water trap of 190
 200 ocean water trap with underwater ball catch of 190
 202 restaurants of 196
 204 clubhouse of 196
 20 206 underwater pro shop of 196
 208 underwater ball catch of 200
 210 irrigation holes of 200
 212 floating nightclub
 214 arched footbridge of 212
 25 216 security check of 212
 218 interior waterfalls of 212
 220 royal blue lights of 212
 222 see-through hunter green stage of 212
 224 see-through dance floor of 212
 30 226 see-through tables of 212
 228 safety net of 212
 230 bar area of 212
 232 spiral ramp of 30
 234 conference center
 35 236 security building
 238 solar panels
 240 wind powered generation source
 242 wave powered generation source
 244 concrete stanchion of 110
 40 246 underwater spa
 248 above water restaurant
 250 safety net of 248
 252 arched access bridge of 248
 254 see-through underwater restaurant
 45 256 multi-tiered waterfall
 258 water pumping station
 260 see-through stream to ocean
 262 water filtration system of 260
 264 arched footbridge over 260
 50 266 swimming pool with see-through bottom
 268 first waterfall of 266
 270 second waterfall of 266
 272 stream of 266
 274 bathers island with tree phone of 266
 55 276 restaurant of 266
 278 wading bar of 266
 280 tiki bar of 266
 282 eating area in pool
 284 open ocean aquarium
 60 286 planetarium
 288 open ocean whale habitat
 290 open ocean shark habitat
 292 compressed air cannon
 294 cannon of 292
 65 296 compressed air chamber of 292
 298 air compressor of 292
 300 plastic tube of 292

302 in-line pressure valve of 292
 304 generator of 292
 306 positioning means of 292
 308 activity mountain
 310 bobsled run
 311 safety net
 312 skateboard and BMX bike concrete wave rider
 314 skydiving pad
 316 bungee jumping pad
 318 restaurant
 320 rock tables
 322 waterfall of 308
 324 hot air balloon ride
 326 cannon bolt sling shot ride
 328 slingshot ride
 330 elevator
 332 ocean water distribution means
 334 desalinated water distribution means
 336 arched bridge of 308
 336 red lights for mountain
 338 white lights for 336
 340 blue lights for 310
 342 church
 344 royal blue robe
 346 gold trim
 348 metallic gold doors
 350 white light
 352 steps
 354 ramp
 356 handrail
 357 stingray arcade
 358 octopus restaurant
 360 telephone kiosk
 362 voice activated telephone
 364 surround sound speaker system
 366 simulated rain forest
 368 live exotic animals
 370 guests
 372 wolf habitat
 374 wolf
 378 welcome building to main island
 380 24 hour BBQ
 382 constant rainbow
 384 floating boat rental
 386 theater
 388 state of the art gym
 390 volleyball court
 392 basketball court
 394 racquetball court
 396 tennis court
 398 ice skating rink
 400 wave pool
 402 laundry facilities
 404 shopping facilities
 406 see through island walkways
 408 workers quarters
 410 atoll
 412 exotic bird sanctuary
 414 atoll restaurant
 416 artificial reef
 418 hotel lobby dome
 420 pool tables
 422 paint ball war
 424 whale maze
 426 medieval gauntlet
 428 water volleyball
 430 laser dodge

432 virtual reality games
 434 mini bowling alley
 436 animal spa with 24 hour boarding
 438 wave pool
 5 440 scuba diving

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

10 The following discussion describes in detail one embodiment of the invention (and several variations of that embodiment). This discussion should not be construed, however, as limiting the invention to those particular embodiments, practitioners skilled in the art will recognize numerous other
 15 embodiments as well. For definition of the complete scope of the invention, the reader is directed to the appended claims.

FIG. 1 is an illustrative view of the present invention 10. The present invention 10 is a man made island complex providing a plurality of facilities 16 including under water
 20 guest quarters 64, an under water monorail 146, under water spa 246, an under water restaurant 254, open ocean marine life wonders and a plurality of above water facilities which may be located off of the main island 22 and accessed by an
 25 arched bridge 336 with angel figurines acting as waterfalls. Also including six dolphin shaped hotels 30 with penthouses 36, bungalows 50, a waterfall 268 that leads to a pool 266, game courts, a church 342, a planetarium 286, restaurants
 248, 254, 276, 358, a 24 hour BBQ 380, state of the art gym
 30 388, full golf course 110, an airport 110 and much more. All islands and facilities are handicap and animal friendly. Emergency back up power and other safety features are also provided throughout the resort.

FIG. 2 is a top view of the present invention 10. Shown
 35 is a top view of the present invention 10, a man-made floating island complex with above and below water facilities 10 having a constant rainbow 382 serving a dual purpose, one for safety and the other for aesthetic purposes. Each facility shown corresponds with a reference numeral
 40 that is defined within the chart on FIG. 3.

FIG. 3 is a location and definition chart of the present invention 10 for use with FIG. 2.

FIG. 4 is a side view of the present invention 10. Shown
 is a side view of the present invention 10 having a main
 45 artificial island 22 constructed from an aero-gel material 20 providing a floatable structure 12 supported by concrete stanchions 152 and anchored by means of retractable anchor pedestals 26 that extend and retract with the sea water tides. The island complex 10 comprises self-generating power by
 50 means of solar 238, wave generated 242, wind generated 240 and turbo-generating 164 electricity. Other sources may also be provided. Other facilities are provided such as a desalinization plant 180 to remove salts and other chemicals from sea water and supplied to all facilities 16 on the
 55 complex 10. A chemical waste disposal plant 174 is also provided. Satellite islands 24 provide facilities 16 for guests 370, including emergency service 120, transportation 18 and activities such as golf 190, an atoll 410 having a restaurant 414 and artificial reef 416 for surfing, open ocean marine life
 60 and others. All facilities 16 are handicap and animal friendly and provide ramps and elevators in case of emergency.

FIG. 5 is an illustrative view of the airport island 110 of the present invention 10. A separate aero-gel airport island 110, supported by concrete stanchions 150 and elevated 12
 65 feet above tidal surge is provided for linking the passenger flow to and from the main island 22. The airport 110 is designed to receive small passenger planes, courier planes

11

and helicopters and provides facilities for both. The state of the art airport **110** also provides airport security **116** and fire and rescue facilities **116**. The emergency (EMS) facility **120** is also located on the airport island **110**. Other facilities are provided for the visiting masses. No vehicle may land or dock without prior notice to the appropriate authorities for safety reasons. This also includes our own helicopters for EMS services and tourist rides.

FIG. 6 is an illustrative view of the desalinization plant **180** of the present invention **10**. The desalinization plant **180** provides the complex facilities **16** with fresh water and uses converted seawater as its source. The plant **180** and process removes salts and other chemicals from seawater, converting the water to fresh useful H₂O. The use between hot or cold water is up to the user and can change from one to the other by means of a switch. A desalinization plant **180** is located on each island and includes flow switch **189**.

FIG. 7 is an illustrative view of the chemical waste and disposal plant **174** of the present invention **10**. The chemical waste and disposal plant **174** receives and treats all waste materials from the islands facilities **16** and dispenses the treated material to a disposal tank to be disposed of properly. A plant **174** is located on each of the islands. Every island has bathroom facilities.

FIG. 8 is an illustrative view of the monorail system **146** of the present invention **10**. The monorail system **146** provides a form of transportation to and from the mainland and the main island **22**. It is a subsurface system and is accessed from a ramp upon the island. The monorail **156** moves in an upward direction to the mainland. At the distal end of the monorail track **152** (mainland), an exit ramp is provided for loading and unloading. The driver can stop the monorail **156** or send an alert message to the main security building **116**. Oxygen drops down for all passenger seats. Also, people or guests do not have access to the drivers.

FIG. 9 is an illustrative view of the turbo generator power facility **164** of the present invention **10**. The turbo-generators **168** provide the island complex **10** with its main source of electricity and is located within the core of the main islands **22** structure. The ramp is an escalator if there are no power outages.

FIG. 10 is an illustrative view of underwater guest rooms **64** of the present invention **10**. The underwater rooms **64** (20 to a string) are accessed by an escalator **70** which turns into a ramp in case of a power failure. Each underwater guest room **64** has its own entrance **76** and a second door **78** in the case of flooding and provides a panoramic view of the underwater world. Each underwater guest room **64** is constructed of bulletproof glass. Exotic gardens surround each unit, providing an added attraction to fish and human observers. Each unit is provided with emergency air tanks **74** and has two doors **76**, **78** providing access, in case of decompression or flooding that may head to other rooms also, each room is self-ventilated with ocean air via lobby by a fresh air and ventilation port **72**. Each underwater guest room **64** provides a different theme.

FIG. 11 is an illustrative view of the above water restaurant **248** and underwater restaurant **254** of the present invention **10**. The above water restaurant **248** is see through and is located off the main island **22** and is accessed by an arched footbridge **252**. The shape of said island may itself be island shaped. The under water restaurant is located below the above restaurant and is accessed the same way. The above water restaurant **248** provides an island type setting as where the under water restaurant **254** provides a maritime setting. An ocean pipe runs through both levels and cascades

12

as a waterfall from the upper level of the above water restaurant **248**, a back up pump system can assist in its effort.

FIG. 12 is an illustrative view of the golf course island **190** of the present invention **10**. The golf course **190** is an 18-hole course and is accessible by an arched bridge **192** from the main island **22** to the golf course island **190**. The arched bridge **192** comprises two dolphin waterfalls **194** that cascade thereover. A clubhouse **204** in the shape of a tee provides eateries **202** and underwater pro shops **206**. An ocean water trap with under water ball catch **200** is comprised of hard plastic with fine holes **210** on the outer portion and inside allows grass to grow through on the edges and allows oxygen through water area keeping it clean. The net **198** around the golf course island **190** is designed to be above water but partially in so that fish do not become trapped within the device. All golf balls are collected as not to pollute the ocean waters. Grass grows through irrigation holes **210** allowing underwater ball catch **200** to stay in place.

FIG. 13 is an illustrative view of the waterfalls and stream **260** of the present invention **10**. The multi-tier waterfall **256** of the stream **260** provides a plurality of tiers that cascade into a see through stream **260** to the ocean. The water used is pumped up from the sea and fed into the waterfall **256** and filtered **262** through special rocks that collect micro fibers as it is reused. The stream **260** meanders approximately ½ block from the falls **256** to the pool **266**. There is no need for chlorine due to constant water flow. The sun, polymeric structure and the flowing of the water warms up the water prior to reaching the final destination, the pool **266**.

FIG. 14 is an illustrative view of the pool **266** and stream **260** of the present invention **10**. The pool **266** is fed by ocean water through a pumping and filtration system **258** to the cascading waterfall **256** via the stream **260** to the pool **266**. A second waterfall **270** in the pool **266** is linked to the main fall **268** for double filtration and having a sitting area under it. The water is constantly being refiltered as it goes through the cycle, so there is no need for chlorine as not to pollute the ocean.

FIG. 15 is a top view of the marina island **136** of the present invention **10**. The marina island **136** is a floating embodiment having facilities **138** and large ship slips **142**, **144** and small boat slips **140**. No persons are to dock without prior nautical plans including cruise liners.

FIG. 16 is a top view of the aquarium **284** of the present invention **10**. The open ocean aquarium **284** of the present invention **10** is located on its own satellite island **24** close to the main island **22**. It provides exotic sea life for the publics viewing. The guests **370** can interact with the marine life under the guidance and supervision of a professional staff. The transportation facilities for the aquarium **284** are located away from the area so not to disturb its inhabitants.

FIG. 17 is a top view of the floating nightclub **212** of the present invention **10**. The floating nightclub **212** of the present invention **10** is supported by concrete stanchions and is accessible by an arched footbridge **192** and provides security check **216** upon entering. The island shaped nightclub **212** comprises two indoor waterfalls **218** that are linked together and fed by ocean water, see through dance floor **224** and stage **222**, two bar areas **230**, tropical setting and lounge deck. A tight mesh net surrounds the nightclub **212** as a safety net **226** and is above water so as not to trap fish. There is no access to the underside portion of the floating nightclub **212** with the exception of a repair entrance.

FIG. 18 is a view of the dolphin shaped guest quarters **30** of the present invention **10**. There are six different dolphin guest quarters **30** on the main island **22**. Each dolphin form

13

will be standing upright on their flukes and facing in different directions due to the lights **44** from the eyes and are located on various parts of the main island **22**. Elevators **46** go up from the lobby **32** and are surrounded by a spiral ramp **49** for emergency situations through the middle of the structure. Ocean water is pumped up a cylinder **39** through the elevator **46** to feed water to the penthouse **36** for aesthetic purposes.

FIG. **19** is a top view of the planetarium of the present invention. The 3D planetarium **286** of the present invention **10** is provided for the guests of the complex **10** and is an educational facility providing animal life and marine life, astrology as well as bible films.

FIG. **20** is a top view of the island bungalows **50** of the present invention **10**. The island bungalows **50** are shaped like a cave having a constant flowing waterfall **54** that may be turned from salt water to fresh water as required by the visitor adding a dual purpose of beauty and shower and presenting a feeling of the outdoors. There is a control switch **56** and pump provided in each unit. There is also a flow switch for all bungalows over water and on land for the water falls.

FIG. **21** is a view of the above water bungalows **50** of the present invention **10**. A plurality of above water bungalows **50** are shaped like caves having a constant flowing waterfall **54** that may be turned from salt water to fresh water as required by the guests including hot and cold water, each unit having its own controls **56**. The bungalows **50** are located on a boardwalk **62** stretching over the water. Room settings will differ from illustration shown above. Each waterfall **54** will have its own flow switch **58** and can be located in different areas of the room depending on its view.

FIG. **22** is a chart of other activities of the present invention **10**. The above chart describes further activities visitors can enjoy on the complex of the present invention **10**.

FIG. **23** is an illustrative view of the whale open ocean habitat **288** of the present invention **10**. The above illustration shows the whale open ocean habitat **288** located on a separate part of the island. The facilities have various sea life that will exhibit them in their natural habitat which may entail the inclusion of mating pairs as determined by the marine biology staff. The above illustration shows the whale open ocean tank **288** located on a separate side of the island. Certain habitat parameters are variable to trigger certain biological function to mimic their natural habitat, e.g. water temperature variation to mimic migration scenario.

FIG. **24** is an illustrative view of the open ocean shark tank **290** of the present invention **10**. The facilities have various sea life tanks that will exhibit them in their natural habitat which may entail the inclusion of mating pairs as determined by the marine biology staff. The above illustration shows the open ocean shark habitat **290**, located on one part of the island. Certain habitat parameters are variable to trigger certain biological function to mimic their natural habitat, e.g. water temperature variation to mimic migration scenario. Also available are protective enclosures whereby guests can view the sharks in their natural habitat.

FIG. **25** is an illustrative view of the air cannon **292** of the present invention **10** in use. Shown is a compressed air cannon **292** using a generator **304** to pump air into a compression chamber **296**, and capable of distance regulation by the amount of air showing on the valve **302** is provided as an additional activity. The air cannon **292** is designed to shoot guests **370** into the water at a pre-selected angle. The cannon **294** will be able to accommodate about 250 pounds. The air cannon **292** is held stable by bolts to the

14

island surface. The air cannon is comprised of a cannon **294** with an aluminum compression chamber **296** welded within the compartment, and has a weather sealant. In operation, a cannoneer pushes a switch on the valve connected to the generator **304** that activates the latch, and then allows for compressed air to shoot a person into the water at a pre-selected angle. Special gear is worn by the user for additional safety.

FIG. **26** is an illustrative view of the activity mountain **308** of the present invention **10**. Shown is a view of the 100 foot activity mountain **308** which is located on its own satellite island **24** having a plurality of activities, a restaurant **318** and facilities for its guests **370**. Included in the activities are the cannon **292**, skydiving **314**, hot air balloon **324**, bungee jumping **316**, skateboarding and BMX biking **312** and slingshot bobsled run **310** with a safety net **311** and others. The slingshot **328** consists of an elastomeric sling with a collapsible seat, when sprung, the user can travel a predetermined distance into the water. The mountain **308** is illuminated by red lights **336** in the evening; the arched bridge **336** with white lighting **338** and the bobsled run **310** is awash in royal blue light **340** to provide a dynamic effect. Ocean water is drawn through a feed pipe **332** for the bobsled run **310** and waterfall **322** and desalinated water is supplied for human and pet consumption.

FIG. **27** is an illustrative view of the church **342** of the present invention **10**. Shown is a view of the church **342** located on the main island **22**. The shape of the church **342** and positioning of structural architecture may not be depicted as it will appear upon completion. The figure of God will have very faint blue eyes and will be looking up towards heaven. He will be wearing a royal blue robe **344** with gold trim **346** and access is provided therein through metallic gold doors **348**, a white beam of light **350** will be ascending from his upraised hand. God is holding the church in the shape of the earth representing all that he has created.

FIG. **28** is an illustrative view of the stingray arcade **357** with octopus restaurant **358** of the present invention **10**. Shown is a view of the under water restaurant **358** inside the arcade in the shape of an octopus. Stingray is also a snack bar that children can acquire food and drink using tokens that are also used to play the provided games with or they would be issued a money card.

FIG. **29** is an illustrative view of a telephone kiosk **360** of the present invention **10**. Phone kiosks **360** are sized and shaped to resemble palm trees and will be located all around the island for the convenience of the visitors and will be equipped with single push button direct links to security, EMT and hotels. The replica coconuts on the palm tree will be equipped with surround sound **364** speakers. Outside lines will be prohibited. The phones will have a code for the handicapped. Turning the push button into voice activation with a tiny microchip acknowledging the code. The code will never change. The phones will be set high enough so children cannot play with them.

FIG. **30** is an illustrative view of a tri-level guest unit **82** of the present invention **10**. Twenty tri-level units **82** are provided within the ocean waters. The shape of each tri-level guest unit **82** will be of a golf tee, following the theme of the resort. They will all be scattered close to the main island **22** with access by an arched bridge. The ocean water will regenerate itself like all other units but here, not only will the ocean water act like a shower **96** with hot and cold water and flow switch, but the third floor has a pool **90** with water slides **94** into the ocean. All tri-level guest units **82** include a hydraulic retractable ceiling **108**. The first floor will be entry living area **86**. The second floor is for bedrooms for

15

kids **88** and the third floor **90** will have an inside waterfall **96** fed by a round cylindrical pipe **96** for the pool **90** as well as showers. The master bedrooms **92** will have an array of foliage, giving a tropical feeling. There is also a wet bar for adults **104**. There is a children's bar **106** located on the second floor **88**. All units are clear. The through cylinder **98** will have different color lights **100** for each unit **88**, following the theme of rainbow. The light beams **100** project into the cylinder **98** with a luminescence control switch **102**. Also provided is a handicap entrance and handicap friendly facilities. The present invention **10** takes ocean water and puts it through the desalination process for all purposes requiring water.

FIG. **31** is an illustrative view of the rain forest enclosure **366** of the present invention **10**. Shown is a climate controlled rain forest enclosure **366** for public awareness of the importance of the eco-system. The rain forest **366** has sound effects, actual rain, actual animals from the rain forest **368** and the like. The trees and other vegetation are designed to look like authentic plant life from the rain forest but are synthetic and mechanized. Periodically, a computerized replica of a bulldozer comes through to knock down the trees and vegetation to simulate the horrors of man destroying the rain forests and to educate people of the losses our planet is suffering and will never be able to reclaim. Unlike the actual rain forests, the trees and vegetation spring back to their original glory when the bulldozer leaves.

FIG. **32** is an illustrative view of the wolf habitat enclosure **372** of the present invention **10**. Shown is a wolf habitat enclosure **372** for public awareness of the importance of the eco-system and endangered species. The wolf habitat **372** can change in appearance to depict the arctic, mountain or woodland environments and natural habitats of the wolf **374**. The wolf habitat **372** is located on the main island **22** for viewing by the guests **370**. Guests **370** can participate to a certain extent. The wolf habitat **372** has tropical and sub-zero conditions to let the wolves **374** roam through different habitats.

FIG. **33** is a chart of the present invention **10** showing other services, facilities and protocol of the present invention **10**.

It will be understood that each of the elements described above, or two or more together may also find a useful application in other types of methods differing from the type described above.

While certain novel features of this invention have been shown and described and are pointed out in the annexed claims, it is not intended to be limited to the details above, since it will be understood that various omissions, modifications, substitutions and changes in the forms and details of the device illustrated and in its operation can be made by those skilled in the art without departing in any way from the spirit of the present invention.

Without further analysis, the foregoing will so fully reveal the gist of the present invention that others can, by applying current knowledge, readily adapt it for various applications without omitting features that, from the standpoint of prior art, fairly constitute essential characteristics of the generic or specific aspects of this invention.

What is claimed is new and desired to be protected by Letters Patent is set forth in the appended claims:

1. A man-made island resort complex with entertainment, educational and lodging facilities comprising:

a) a buoyant base support structure capable of floating on a body of water;

16

b) means for anchoring said base support structure to the sea floor so as to remain in a specific, preselected location regardless of currents, tides, wind and other such destabilizing factors;

c) surface and underwater facilities affiliated with said base support structure; and a plurality of means for transporting people and cargo thereto, wherein said surface and underwater facilities include lodging for guests and staff, a plurality of said guest lodging facilities are provided both on the surface and underwater, said surface based guest lodging facilities include a plurality of dolphin-shaped hotels and each said dolphin shaped hotel comprises:

- i) a lobby;
- ii) a plurality of guest rooms;
- iii) a penthouse with a retractable ceiling;
- iv) a water tube leading from the hotel base to the penthouse passing through the elevator with ocean water flowing therethrough;
- v) a sub water plump to transfer ocean water to the penthouse; and
- vi) external royal blue lights emanating from the dolphins eyes.

2. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein said base support structure is fabricated of an aero-gel material.

3. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein a plurality of base support structures form a main island and linked satellite islands.

4. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein said surface based guest lodging facilities further include a plurality of cave-shaped bungalows located on a boardwalk over the water with said bungalows comprising:

- a) an external dome-like structure resembling natural stone;
- b) an interior waterfall and basin for bathing and aesthetic purposes;
- c) hot and cold water control switches with flow switch;
- d) means for changing the water introduced into the basin from the waterfall from salt water to fresh water as needed; and
- e) a toilet area with hot water.

5. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein said underwater guest lodging facilities include a plurality of independent underwater rooms comprising:

- a) an exterior portion manufactured of bulletproof glass with each room shaped like a different form of exotic sea life;
- b) fresh air and ventilation ducts;
- c) a room access port;
- d) a door to the room;
- e) a door to the tube;
- f) a surface-based lobby;
- g) an enclosed escalator tube for transporting people and gear from the lobby to said underwater room;
- h) emergency air tanks; and
- i) fire extinguishers.

6. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 5, wherein said escalator tube includes an escalator that collapses to a flat ramp in the event of a power outage.

7. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1,

17

wherein said guest lodging facilities further includes a plurality of tri-level units shaped like golf balls on tees which are partially submerged in the ocean waters comprising:

- a) a spherical habitat manufactured of transparent bullet-proof glass;
- b) a first floor living area;
- c) a second floor children's bedroom;
- d) a third floor swimming pool;
- e) a master bedroom;
- f) water slides to the ocean from said third floor;
- g) a closed waterfall feeding the third floor pool with ocean water;
- h) a transparent water feed cylinder extending centrally from the ocean water at the bottom of the structure to said closed waterfall on said third floor to supply water thereto;
- i) a light source projecting upward through said water feed cylinder to illuminate the cylinder and the water passing therethrough;
- j) a luminescence control switch for said light source;
- k) a wet bar on said third floor;
- l) a children's bar located on said second floor; and
- m) a hydraulic retractable ceiling.

8. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein all said facilities are designed and constructed to be handicap and pet accessible and user-friendly.

9. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein said transportation means includes:

- a) an airport for small planes on its own island which is supported by a concrete stanchion communicating with the sea floor;
- b) a marina island for ships; and
- c) a monorail system to transport people and cargo between the mainland and the man-made island resort complex.

10. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 9, wherein said airport is on a satellite island comprising:

- a) one or more runways;
- b) at least one helicopter helipad;
- c) an air traffic control tower;
- d) an airport security, fire and rescue headquarters;
- e) an emergency medical services facility;
- f) an emergency vehicle hangar;
- g) an airport marina;
- h) a nautical plans facility adjacent said air traffic control tower;
- i) a visitor comfort station adjacent said air traffic control tower;
- j) a flight office adjacent said air traffic control tower; and
- k) landing lights.

11. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 9, wherein said marina island comprises:

- a) a plurality of support and service facilities;
- b) a plurality of small boat portages;
- c) a plurality of large boat slips; and
- d) a plurality of ocean liner slips.

12. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 9, wherein said monorail system comprises:

- a) at least one hermetically sealed monorail transport communicating between the mainland and said main island;

18

- b) concrete stanchions to support said monorail transport;
- c) a monorail track extending the length of each said monorail transport;
- d) at least one monorail train; and
- e) a passenger transport center at the end of the monorail transport on the man-made island resort complex.

13. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 12, wherein said monorail train includes:

- a) a passenger compartment;
- b) a drivers compartment that is inaccessible from said passenger compartment; and
- c) windows with bulletproof glass in said drivers compartment and said passenger compartment.

14. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, further including a vital services infrastructure comprising:

- a) a desalination plant on said man-made island resort complex to convert sea water to fresh water for use in all facilities;
- b) a security force;
- c) medical facilities and personnel;
- d) a communications network throughout all facilities including voice-activated telephone kiosks resembling palm trees having a surround sound speaker system within the faux coconuts;
- e) a turbo-generator power facility to provide the bulk of needed electricity to the complex;
- f) solar panels having means for harvesting, storing and distributing solar energy;
- g) a church in the shape of the Earth being held by Jesus wearing a blue robe with gold trim, the doors thereof being a metallic gold;
- h) a chemical waste disposal plant;
- i) a water pumping station;
- j) laundry facilities;
- k) workers quarters;
- l) a welcome building and information center for guests;
- m) 24 hour emergency facility for guests;
- n) 24 hour emergency veterinary hospital; and
- o) novelty shops.

15. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 14, wherein said turbo-generator power facility comprises:

- a) at least one sea water intake line;
- b) at least one turbo-generator;
- c) a water outtake line; and
- d) a power distribution line.

16. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 14, wherein said chemical waste and disposal plant comprises:

- a) a chemical waste treatment facility;
- b) a power source from said turbo-generated power plant;
- c) a treated waste outlet to disposal tank; and
- d) a waste inlet from facilities.

17. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 14, wherein said desalinization plant comprises:

- a) a purification system;
- b) a sea water intake conduit to said purification system;
- c) an outtake conduit from said purification system to the sea;
- d) electricity from turbo-generated power plant;
- e) hot and cold fresh water distribution means; and
- f) a flow switch.

19

18. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 1, wherein said entertainment and educational facilities include, but are not limited to:

- a) an 18-hole golf course;
- b) boat rentals for all kinds of water activities;
- c) an aquarium including:
 - i) a whale open ocean habitat wherein certain habitat parameters are variable to trigger certain biological functions to mimic their natural habitat by providing water temperature variation to mimic migration scenario;
 - ii) a shark open ocean habitat wherein certain habitat parameters are variable to trigger certain biological functions to mimic their natural habitat by providing water temperature variation to mimic migration scenario; and
 - iii) a dolphin open ocean habitat wherein certain habitat parameters are variable to trigger certain biological functions to mimic their natural habitat by providing water temperature variation to mimic migration scenario;
- d) a floating nightclub;
- e) a planetarium;
- f) a theater;
- g) an underwater spa;
- h) a gym;
- i) volleyball courts;
- j) basketball courts;
- k) racquetball courts;
- l) an underwater ice skating and hockey ring;
- m) at least one swimming pool;
- n) a wave pool;
- o) an exotic bird sanctuary;
- p) a 100 foot high activity mountain providing means for participating in a plurality of activities including, but not limited to:
 - i) a skateboard and BMX bike concrete wave rider;
 - ii) a restaurant;
 - iii) skydiving;
 - iv) bungee jumping;
 - v) rock tables for sitting;
 - vi) a bobsled run from the mountain into the ocean at an 85 degree incline;
 - vii) a waterfall;
 - viii) hot air balloon rides;
 - ix) an air cannon ride for shooting participants through the air into the ocean at a pre-selected angle;
 - x) a giant slingshot ride having an elastomeric sling and collapsible seat for hurling participants through the air into the ocean;
 - xi) an artificial reef for surfing;
 - xii) parasailing;
 - xiii) an arched bridge;
 - xiv) an elevator;
 - xv) a transparent pipe in said elevator;
 - xvi) an arched bridge extending from said mountain to said bobsled run;
 - xvii) white lights to illuminate said arched bridge at night;
 - xviii) red lights to illuminate said mountain at night;
 - xix) royal blue lights to illuminate said bobsled run at night;
 - xx) means for delivering ocean water to said waterfall and said bobsled run; and
 - xxi) means for delivering desalinated water for human and pet consumption;

20

q) a simulated rain forest complete with real animals and mist and a computerized bulldozer that knocks down some simulated trees which return to their original position when the bulldozer leaves;

- r) an interactive wolf habitat in which participants can observe the natural behavior of wolves in a plurality of environments;
- s) a plurality of dining facilities;
- t) a plurality of shopping facilities; and
- u) an underwater water arcade shaped like a stingray.

19. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 18, wherein said golf course is located on its own satellite island comprising:

- a) an arched access foot bridge from the man-made island resort complex including two dolphin waterfalls that cascade thereover;
- b) a structure in the shape of a golf ball on a golf tee with restaurants in the portion resembling the ball, a clubhouse overlooking the golf course in the portion resembling the tee, and underwater pro shops at the base of the tee;
- c) at least one ocean water trap with underwater ball trap comprised of hard plastic with an arcuate bowl like portion having a peripheral lip with the entire unit having fine holes extending therethrough; and
- d) an ocean water trap comprising a net that extends upward in a substantially vertical manner around the periphery of the island to prevent errant golf balls from landing in the ocean.

20. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 19, wherein said holes in the peripheral lip of said ocean water trap with underwater ball trap are irrigation holes having sea grass growing therethrough to maintain the position of said ocean water trap with underwater ball trap and the holes in the bowl portion thereof allow ocean water to pass therethrough to fill the water trap while retaining any golf balls therein to prevent them from entering the ocean, the irrigation holes with the underwater ball trap also serve as a self ventilation to keep it clean.

21. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 18, wherein said floating nightclub is located on its own satellite island that is supported by concrete stanchions and accessed from the man-made island resort complex by an arched footbridge.

22. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 18, wherein said floating nightclub comprises:

- a) a security check at the entrance;
- b) one or more interior waterfalls fed by ocean water and illuminated by royal blue lights;
- c) a see-through, hunter green stage;
- d) a see-through dance floor illuminated by red lights;
- e) a plurality of see-through tables with chairs;
- f) at least one bar area; and
- g) a net surrounding said island of said floating night club that is above water to prevent fish from getting trapped therein.

23. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim 18, wherein said arcade is in the shape of a stingray and comprises:

- a) a plurality of games; and
- b) a restaurant in the shape of an octopus.

21

24. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim **18**, wherein said compressed air cannon comprises:

- a) a cannon;
- b) a compressed air chamber within said cannon;
- c) an air compressor;
- d) a plastic tube communicating between said air compressor and said compressed air chamber;
- e) a pressure valve in line between said air compressor and said compressed air chamber;
- f) a generator to power said air compressor; and
- g) means for selectively positioning said cannon through a range of horizontal and vertical planes.

25. A man-made island resort complex with entertainment, educational and lodging facilities as recited in claim **18**, wherein said entertainment and educational facilities further include:

22

- a) an underwater paint ball war game;
- b) an underwater whale maze;
- c) an underwater medieval gauntlet;
- d) underwater water volleyball;
- e) underwater laser dodge;
- f) underwater virtual reality games;
- g) an underwater bowling alley;
- h) racquetball courts;
- i) an underwater spa with all the amenities;
- j) an above water gym with a see-through Jacuzzi;
- k) an underwater convention center with conference rooms; and
- l) see-through walkways whenever applicable.
